# Allianz Trade API

Online services connecting credit insurance

**ALLIANZ-TRADE.US**

Euler Hermes North America Insurance Company and its affiliated debt collection company are part of the Allianz group and market their products and services using the 'Allianz Trade' trademark.

# What is Allianz Trade API?

All integrated within your system!

Allianz Trade API\* enables Allianz Trade credit insurance solutions to be integrated into your company's systems and automated processes.

## Allianz Trade API adapts to fit your company's specific needs

It is designed for companies that manage hundreds of credit limits as part of their business operations. Allianz Trade API complements your credit insurance policy\*\* and makes it easier and faster for your business to receive our support for your credit management activities.

## How does Allianz Trade API help your business succeed?

With Allianz Trade API, your business receives real-time information from Allianz Trade directly within your credit management system. It provides your company automated access to our knowledge, which you can use to make important credit decisions about your customers. By using Allianz Trade API, all of your core exchanges with Allianz Trade can be streamlined and managed right from your credit management system. You will noticeably reduce the time and effort of manually entering information.

**Allianz** 

**ALLIANZ TRADE API\***  
Integrated processes with automated and secure data transfer.\*\*\*

### SIMPLIFICATION

→ Simplify and automate your credit management processes

Allianz Trade API enables you to automate the standard requests and interactions you have with Allianz Trade within one unique tool: your IT system. This saves time as well as manual effort and allows you to focus on growing your business.

### SPEED

→ Provide quicker responses to your customers

Allianz Trade API gives you the information you need to efficiently react to customer inquiries. This can lead to a valuable advantage, compared to your competitors who may rely on more time-consuming credit management processes.

### ACCURACY

→ Schedule regular updates of your credit limits

Once Allianz Trade has new information about one of your buyers or prospects, it is regularly integrated into your credit management system thereby increasing the accuracy of your analysis.

### PROACTIVITY

→ Manage your company's risks proactively

Allianz Trade API provides your credit managers with automated insights about your company's credit risks along with enhanced reporting and alerting capabilities.

\* Application Programming Interface

\*\* Without changing nor overriding the terms and conditions of your policy

\*\*\* Requires IT-development

## Benefit to customers

The integration of Allianz Trade API has been pivotal in improving our customer's trade credit insurance management, reducing the effort and time spent. Before the integration of our APIs, they had to create the customer in their ERP system, search for the new customer in our online platform, request a credit limit, monitor it and feed the information back into the ERP system for local teams to then process accordingly. After the integration this was all possible within their ERP system without switching systems. An additional benefit is the reduced error-proneness, as the systems communicate directly.

## Manage your credit insurance policy from your own system

You can set up automatic preconfigured reports to support the management and steering of your global risk portfolio such as:

- ☒ Claims and reporting deadlines
- ☒ Utilization of your credit limits
- ☒ Changes in your coverage

You can also set up alerts such as:

- ☒ Actual outstanding invoices are exceeding the Allianz Trade cover
- ☒ New credit limit requests to be made
- ☒ Actual outstanding invoices are lower than the Allianz Trade cover

Simplify your credit management process by scheduling the type and frequency of alerts and updates your organization needs.

## High level of security

Allianz Trade API is a JSON-based REST API and uses OAuth2 protocol to establish a direct and secure link between your IT system and Allianz Trade API.

All of your information is optimally encrypted using Transport Secure Layer (TLS) technology. Forgery-proof authentication with Allianz Trade API is another guarantee that data exchange only takes place with Allianz Trade API.

## What is the Allianz Trade implementation process?

Allianz Trade API can be implemented with your company's credit management system whether your company uses its own proprietary system or any another provider, such as SAP®, Oracle®, or Microsoft®.

The implementation process should be started from our developer portal – [developers.allianz-trade.com](https://developers.allianz-trade.com). We have a well-trained, knowledgeable team that can answer all your questions and help you ensuring a smooth implementation. After the implementation of Allianz Trade API, your Allianz Trade consultant will continue to provide you with dedicated support.

# Confidence in Tomorrow

Euler Hermes North America Insurance Company and its affiliated debt collection company are part of the Allianz group and market their products and services using the 'Allianz Trade' trademark.
