

# Autumn Economic Outlook 2024-26: The great balancing act

Allianz Research

*End of Q3 2024 updated economic and capital  
markets outlook*

30 September 2024

# Economic outlook 2024-26: The great balancing act

- 1 **Steady (not stellar) global growth ahead at +2.8% until 2026, in line with the long-term average.** The US economy is slowing but will remain the main support to the global economy in 2024. Momentum is gradually building in Europe but will be weak in China, given the absence of major stimulus.
- 2 **Recession risks in the US are rising but the economy is still within the range of a soft landing** helped by strong household finances, a rising trend in manufacturing investment and its technology sector. However, US consumption is expected to slow further next year, in line with the slowdown of earnings growth. In Europe, leading indicators still show recession risks but are improving from low levels.
- 3 **It's austerity time (again).** The fiscal consolidation ahead will be the big elephant in the room as it will represent a drag on GDP growth of around -0.3pp on average until 2027 in both US and Europe. Tax hikes, mainly on corporates, are more likely than spending cuts. In addition, quantitative tightening (QT) will transfer more than 3pps of debt/GDP per year to investors in Europe.
- 4 **Inflation should reach the 2% target in H1 2025, allowing for a strong(er) easing cycle ahead.** Inflation surprised on the downside during the summer, and we expect sticky services inflation to soften slowly, driven by decelerating wages, while energy and goods will continue to drag inflation down. Oil prices should remain below 80 USD/bbl in 2025-26 in the absence of a stronger recovery in demand and no supply shock. Gradual central bank easing should continue until terminal rates are reached next year, with the Fed cutting down to 3.5%, the ECB to 2.25% and the BoE to 3.0%. Emerging market central banks will cautiously proceed with their easing cycles as portfolio inflows should pick up again on more favorable interest rate differentials.
- 5 **Real wage growth revives consumers' purchasing power, but excess savings continue to build up in Eurozone countries amid subpar confidence.** Consumer spending has favored services over goods, but amid high inflation, services sales in volume have started to slow. Some durable goods are likely to be replaced in the next quarters, especially in Europe, in line with the replacement cycle. Nominal wage growth is set to normalize by 2025 in line with the cooling down of labor markets once some corporates (mainly in food, auto, materials, and machinery & equipment) reduce labor hoarding.
- 6 **Restocking has started and is likely to be a tailwind for the global trade recovery.** H1 confirmed the exit from 1.5 years of trade recession, and we expect the recovery to be more sustained going forward, along with the rebound in consumption. Overall, we expect global trade to increase by around +3% in 2025-26 in volume terms, but to remain below the long-term average.
- 7 **Corporates are recovering by digging into inventories.** Revenues and earnings growth in Q2 were fueled by corporate destocking. The Europe-US divide persists; despite a slight improvement in corporates' financials in Q2, Eurozone fixed capital investment fell to 7% below pre-pandemic levels and far behind peers such as the US and the UK. Major insolvencies continued to accelerate, mainly in retail, construction and services. Overall, we expect business insolvencies to rise by +10% in 2024 and by +1% in 2025.
- 8 **Capital markets remain under the spell of central banks.** Markets are now pricing a strong policy rate cutting cycle for most Western central banks, dragging long-term government bond yields lower while providing some tailwinds to riskier investments, with government bond spreads in Southern Europe narrowing further. As we see less easing by the Fed and the ECB compared to market pricing, we do not see long-term yields falling below current levels in the near term.
- 9 **Risky assets at the mercy of political uncertainty.** After a relatively weak Q2 earnings season, which has partially deflated some market imbalances (e.g. AI boom), market participants have quickly lowered expectations for corporates' growth capabilities. Nevertheless, decent single-digit earnings and revenue growth paired with declining financing rates should help maintain a decent single-digit return profile over the next three years. However, still elevated (geo)political uncertainty will keep investors awake as periods of heightened volatility are to be expected.
- 10 **Geopolitical tensions pose downside risks to our scenario** with a potential surge in US protectionism if Donald Trump wins the US elections, along with high political uncertainty in major European countries (France, Germany, Belgium, Netherlands...) as well as the ongoing conflicts in Russia-Ukraine and the Middle East and tensions in the South-China-Sea and with Taiwan. Overall, our downside scenario translates to -1.5pp lower global growth and +1pp higher inflation, which would keep interest rates higher for longer.

# Global macro

# 2024-2026

# What have we learned during summer? 1/2

Inflation and economic activity surprised on the downside, initiating a faster monetary easing cycle

Sources: Citi, LSEG Datastream, Allianz Research

Notes: Citi Economic Surprise index on the x-axis and August inflation versus economists' expectations on the y-axis.

Democrats overtook Republicans in the polls

Note: the scope is global

# Restocking a tailwind for global trade recovery

Global trade growth recovering but to remain below long-term average

Sources: LSEG Datastream, Allianz Research

Export orders improve for most sectors, especially those with low inventories

PMI New export orders Aug. 23 (y-axis) vs Aug.24 (x-axis)

Sectors with markers in red have low inventories (PMI Stock of finished goods < 50)  
Sources: S&P Global, Bloomberg, Allianz Research

# Exports are recovering, especially in EM Asia and the Middle East

The global trade recovery supports the manufacturing sector, particularly in Asia and the Middle East

Sources: LSEG Datastream, S&P Global, Allianz Research

Trade outlook remains very uncertain, depending on the US trade policy from 2025

Note: this scenario assumes tariffs on China are increased to 60% and tariffs on many other countries are increased to 10%, on all goods that are not critical dependencies. Most countries also retaliate with tariff hikes on imports from the US.

Sources: Oxford Economics model, Allianz Research

# The Eurozone needs to revive investment

**Eurozone fixed capital investment fell to 7% below pre-pandemic levels and far behind peers**

Gross fixed capital formation index 100 = Q4 2019

Sources: LSEG Datastream, Allianz Research

**Draghi's report: Reduce regulation to boost investment**

Boost investments in decarbonization, digital innovation, and infrastructure to 5% of GDP to maintain global competitiveness

Bridge the innovation gap with higher investments in R&D and pivot on a tech strategy to bring technology to the market

Decarbonization with affordable green tech and consistent energy strategy - invest in grids and decouple fossil from clean energy prices

Reduce economic and security dependencies by redesigning value chains, improving joint procurement, and allowing select mergers

Less with more focus: streamline regulations, unify industrial policy, address fragmented capital markets and financial systems, focus on emerging sectors that drive future innovation and competitiveness

Sources: various, Allianz Research

Sources: LSEG Datastream, Bloomberg, Allianz Research

Notes: Year end figures

\* As of 26.Sep 2024

# Long-term yields are caught between falling policy rates and government spending on top of QT

Sovereign bond yields to ease slightly on lower policy rates and further normalizing inflation expectations

Sources: LSEG Datastream, Allianz Research

Net debt issuance and ongoing quantitative tightening to slow down the fall in yields

Fair value US 10y government bond yield, annual delta in bps

Sources: Bloomberg, Allianz Research

Notes: The fair value model uses 3m OIS rates, University of Michigan long-term inflation expectations, the ISM purchasing manager index and the share of US debt to be bought by private domestic investors (i.e. excluding the Fed and overseas investors)

# German yield inversion sticky while French government bond spreads to narrow only next year

Yield curve inversion to cease unevenly, Germany lags on high ECB terminal rate and little Bund supply

10y – 2y government bond yields in bps

Sources: LSEG Datastream, Allianz Research

Spread normalization continues anticipating ECB pivot, economic rebound and European integration

Yield spreads vs. 10y German bund yields in bps

Sources: LSEG Datastream, Allianz Research

# Real bond yields to stay above 2010s levels in line with economic growth again

US real government bond yield to stay at pre-GFC levels after a decade of ultra-loose monetary policy

Nominal and real 10y government bond yields, %

Source: Bloomberg, LSEG Datastream, Allianz Research  
 Notes: Real yields based on inflation linked bonds.

Similarly, German real yields are back to pre-Euro-crisis levels and set to remain at these levels

Nominal and real 10y government bond yields, %

Source: Bloomberg, LSEG Datastream, Allianz Research  
 Notes: Real yields based on inflation linked bonds which were only introduced in 2006 in Germany and continuous time series are only available from 2012.

# Bond yields react to terminal rate pricing while short term expectations impact FX markets

Expected terminal rates fell in line with 10y yields during summer and are now below our expectations

%

Sources: Bloomberg, Allianz Research  
 Notes: Dotted lines show future based expectations of policy rates at the end of 2026

Markets have priced in more cuts for the Fed than the ECB in 2024 which has given the Euro some tailwind

Policy rate delta in bps and EURUSD

Sources: Bloomberg, Allianz Research

# Modest depreciation ahead for the USD amid gradual economic and geopolitical normalization

The USD remains overvalued against JPY and CNY but less so against the EUR

Real effective exchange rate indices (2014=100)

Sources: LSEG Datastream, Allianz Research

Comparatively stronger easing by the Fed compared to ECB provides some tailwind to the EUR

Yield differentials in pp and EURUSD exchange rate

Sources: LSEG Datastream, Allianz Research

# The earnings momentum is cooling signaling lower market returns moving forward

The earnings boom, especially for Tech, is cooling leaving the door open for market consolidation

Sources: LSEG Datastream, Allianz Research  
 Note: Dots represent 2024 and 2025 consensus

Our EPS-based modelling hints towards a 7 to 9% total return for the S&P 500 moving forward

Sources: LSEG Datastream, Allianz Research

# US EQ remains pricy, but we continue to expect high-single/low-double digit returns through 2026

The latest EQ market correction has timidly reduced the priciness of US equities, but valuations remain stretched

Sources: LSEG Datastream, Allianz Research  
\*ERP: Equity Risk Premium

Resilient earnings and favorable risk appetite set stage for equities to finish 2024 at ~10-15% total return

Sources: LSEG Datastream, Allianz Research

# Credit spreads remain tight, but no structural widening expected

Fundamentals suggest there might be room for further spread compression but already tight spreads

Sources: LSEG Datastream, Allianz Research

... deteriorating debt servicing and a need to refinance at higher rates hints towards sideways trading

Sources: LSEG Datastream, Allianz Research  
 Note: ICR – Interest Coverage Ratio

# High demand and increasing credit quality should keep spreads stable through 2026

Despite stable fundamentals, spreads will remain extremely vulnerable to equity volatility

bps

Sources: LSEG Datastream, Allianz Research

Corporate spreads look tight given the uncertainty thus we do not expect a significant compression

bps

Sources: LSEG Datastream, Allianz Research

# EM LC returns gain from falling yield, HC spreads to remain tight

Local currency return trending upwards amid weak USD and falling yields

Performance breakdown, y/y %

Sources: Bloomberg, Allianz Research. The performance of emerging market local currency sovereign debt is proxied by the JPM GBI-EM Global Diversified Index

EM spreads hold tight; yields to trend lower structurally but possible upward movements in the short term

%, bps

Sources: Bloomberg, LSEG Datastream, Allianz Research. HC = Hard Currency. LC = Local Currency. Sov = Sovereign.

# EM equities to underperform, we remain cautious amid regional headwinds

CAPE ratios for Taiwan and India almost at decade high, while China's earnings deteriorate despite low valuation

Sources: Barclays, Allianz Research.

Note: Equity markets of the selected regions are proxied by region-specific indices published by MSCI; China (24.4%), India (19.9%), Taiwan (18.8%), South Korea (11.7%) and Brazil (4.5%) are the top five weighted economies in the MSCI EM Index as of Aug 30

Increased volatility on China's latest stimulus and macro & political uncertainty

Sources: LSEG Datastream, Allianz Research.
